Kulshan Carbon Trust - Appendix: In-Stand Surface Application of Biochar in Forestlands

Final comments from Expert Peer Reviewers in response to revised methodology based on the Expert Peer Review:

Reviewer 1:

The updated version of the methodology looks fine to me. I understand the limited scope of the project and appreciate the thoughtful response regarding supporting Indigenous land management and other methods of producing biochar. There is a lot of work to be done to bring biochar production into regular land management practices all around, and I know that what you are doing is just one of many steps along the way. Thank you for incorporating my feedback!

Reviewer 2:

It looks good! I just had one comment at the end of section 4 on the seasonality of the work. Instead of preferring fall, I would say avoid heavy rain times. I do a lot of my burning here in Oregon in the spring.
